Dear EPA -

I've studied this issue quite a bit, and I've concluded that Alternative I just doesn't do enough for the health of wildlife or people. You need to dredge at least the volume and area that Alternative G prescribes. Please dredge at least 500 acres of contaminated sediment! Corporations should not control this process. The EPA needs to uphold the Public Trust - and half measures do not do that.

EPA - do more for the Willamette and the people who consume fish there. You need to be able to lift the Fish Consumption Advisory for all people at the conclusion of the cleanup by a specific date. Further, Institutional Controls really dont work - making the removal of more contaminated sediment that your current proposal an essential element for the long term health of the Willamette.

I urge you to take bold action, and to do the right thing.
